

RACT/BACT/LAER Clearinghouse (RBLC) Clean Air Technology Center Annual Report for 2002

RACT/BACT/LAER CLEARINGHOUSE (RBLC)

CLEAN AIR TECHNOLOGY CENTER

ANNUAL REPORT FOR 2002

Prepared by:

CLEAN AIR TECHNOLOGY CENTER
INFORMATION TRANSFER AND PROGRAM INTEGRATION DIVISION
OFFICE OF AIR QUALITY PLANNING AND STANDARDS
U.S. ENVIRONMENTAL PROTECTION AGENCY
RESEARCH TRIANGLE PARK, NORTH CAROLINA, 27711

April, 2003

DISCLAIMER

This report has been reviewed by the Information Transfer and Program Integration Division of the Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency and approved for publication. Approval does not signify that the contents reflect the views and policies of the U.S. Environmental Protection Agency. Mention of trade names or commercial products is not intended to constitute endorsement or recommendation for use. Copies of this report are available from the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161, telephone (800) 553-6847.

ACCESSING THE RBLC WEB

The RACT/BACT/LAER Clearinghouse (RBLC) maintains an on-line data base (RBLC Web) of all control technology determinations that have been submitted to it. The RBLC Web and other related information are available at the Internet address listed below. Detailed instructions about how to access the RBLC are contained in the RBLC User's Manual.

World Wide Web (WWW) <http://www.epa.gov/ttn/catc/>

The RBLC can be reached by clicking the appropriate icon on the CATC home page.

The RBLC Web site lets you access all of the information in the Clearinghouse with your Web browser. To access the online data entry portion of the RBLC, you must be an authorized permit agency editor. Contact the Clean Air Technology Center (CATC) Information Line at (919) 541-0800 for information on gaining authorization for online data entry. Data can also be entered off-line by using the RBLC Standalone Editor, a computer program that you can run on your personal computer. The RBLC Standalone Editor can be downloaded from the RBLC Web. It simulates data entry on the RBLC Web and generates a file that can be sent to the RBLC by E-mail or on a floppy disk. Call the CATC Information line for more information.

ACKNOWLEDGMENT

This project would not have been possible without the cooperation of the many State and local air pollution control agencies and EPA Regional Offices who submitted the necessary technical information. A list of all Regional offices and State and local agency RBLC contacts is provided in Appendix B.

Special thanks are given to Mr. William Becker, Executive Secretary for the State and Territorial Air Pollution Program Administrators/Association of Local Air Pollution Control Officials (STAPPA/ALAPCO), Mr. Robert Hodanbosi from the Ohio EPA and Mr. William O'Sullivan from the New Jersey Department of Environmental Protection representing STAPPA, Ursula Kramer, Pima County Department of Environmental Quality (Tuscon, AZ) and John A. Paul from the Regional Air Pollution Control Agency (Dayton, OH) representing ALAPCO, and other State, local, and EPA Regional Office representatives who have provided comments and overall support for the RACT/BACT/LAER Clearinghouse.

INTRODUCTION

This RBLC annual report contains information on the 437 permits entered and the 1,075 permits modified in the Clearinghouse from January 2002 to December 2002 and provides an overview of data entry activity over the last five years. It summarizes this activity in terms of EPA Regions, States, and industrial processes; discusses trends over the past five years; and presents plans for additions and improvements to the clearinghouse. More detailed information is contained in the appendices.

- C Appendix A - About the RACT/BACT/LAER Clearinghouse: The regulatory background and history of the programs served by the RBLC, the purpose of RBLC, and a summary of RBLC Web capabilities.
- C Appendix B - Index of RBLC State and Local Contacts
- C Appendix C - Index of Control Technology Determinations Entered or Modified in 2002 Sorted by EPA Region and State: A summary listing of the determinations added or updated in 2002. Information includes the name of the company, permit date, process type code, process description, and RBLC ID number as a reference for additional information. A '*' next to the entry indicates that the determination is considered a DRAFT entry and may not be complete.

Previous versions of this annual report have provided extensive tables with detailed information on individual determinations entered in the report year and listings of determinations entered or modified within the past five years. This information is easily available through the RBLC Web and its query and reporting functions. Interested readers can browse the data base on-line for additional details.

Last year's RBLC annual report also included appendices containing a listing of RBLC Process Codes and the RBLC Data Entry Form with instructions. Both of these items are available in the RBLC User's Manual. The RBLC User's Manual and the RBLC Data Entry Form and instructions can be viewed on or downloaded from the RBLC Web.

NATIONAL SUMMARY OF RBLC ACTIVITY

The data entered into the RBLC are provided by State and local agencies. Submittals represent these agencies' permitting and reporting efforts for major new sources and modifications to existing major sources. Submittals to the RBLC are, for the most part, voluntary. Only LAER determinations must be submitted to the RBLC (section 173(d), Clean Air Act).

The year 2002's activity shows a 41 percent increase in the number of submittals from those in 2001. The yearly totals for determinations entered into the RBLC for the years 1998 through 2002 are shown in Figure 1. Figure 2 shows each region's contribution over the five-year period and for the year 2002. Table 1 breaks down these entries by EPA Region and year for the five-year period.

Regions 4 remained the highest contributor for the five-year period by adding 123 new determinations in 2002. Region 2, which was one of the lowest contributors from 1998 through 2001, added a significant number of new determinations in 2002. Region 6, with a contribution of 128 determinations, provided the largest number of entries for 2002. A review of the contributions for the individual regions is presented in the next section.

The RBLC has worked with EPA Regional Offices and State and local permitting agencies to identify major New Source Review (NSR) permits issued since 1991 that had not been submitted to the Clearinghouse. Many agencies voluntarily entered these missing determinations. To minimize resource demands on permitting agencies, the RBLC sent its contractor to selected EPA Regional Offices and State and local permitting agencies to acquire missing permit information.

In addition, in 2001, EPA began reviewing all existing determinations in the RBLC with permit issued dates within the previous ten years to identify information missing from existing RBLC entries. Information on both permit determinations not in the RBLC and information missing from existing RBLC permit entries was acquired during contractor visits. This work continued through 2002 and contributed to the large number of determinations modified during 2002. Figure 3 details this work graphically.

Figure 1 - Number of Determinations Entered Per Year (1998-2002)

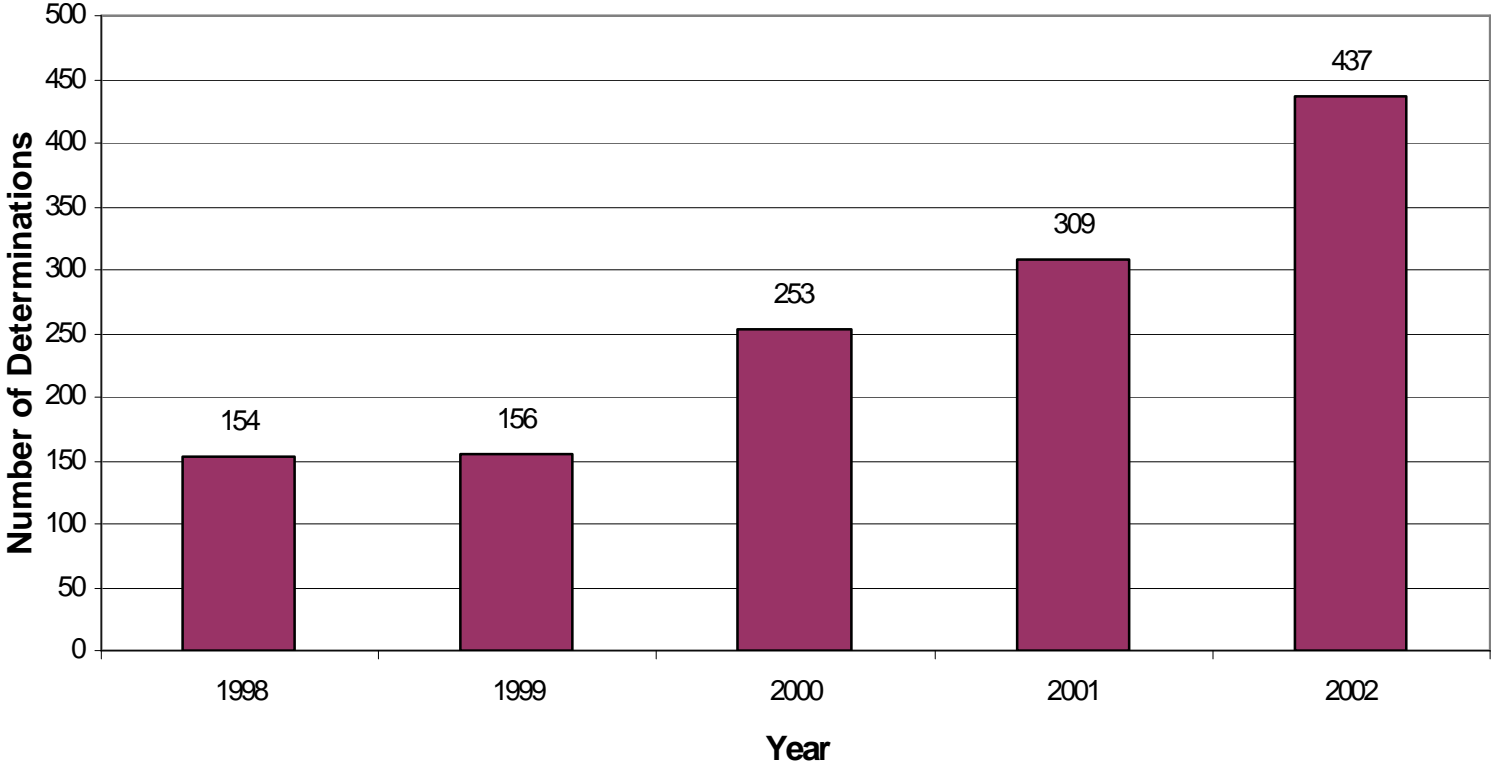

TABLE 1. Determinations Entered by Region 1998 - 2002

YEAR	EPA REGION										TOTAL
	1	2	3	4	5	6	7	8	9	10	
1998	4	13	8	15	12	12	2	25	60	3	154
1999	17	2	2	21	24	9	6	25	47	3	156

2002	1	39	50	123	85	128	6	3	0	2	437
TOTAL	60	54	87	338	264	192	43	81	173	17	1309

EPA Regions:

Region 1 - Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Region 2 - New Jersey, New York, Puerto Rico and the U.S. Virgin Islands.

Region 3 - Delaware, Maryland, Pennsylvania, Virginia, West Virginia, and the District of Columbia.

Region 4 - Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.

Region 5 - Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

Region 6 - Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

Region 7 - Iowa, Kansas, Missouri, and Nebraska.

Region 8 - Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

Region 9 - Arizona, California, Hawaii, Nevada, and Pacific Islands and Tribal Nations subject to US law.

Region 10 - Alaska, Idaho, Oregon, and Washington.

Figure 2 - Number of Determinations Entered by Region (1998 - 2002)

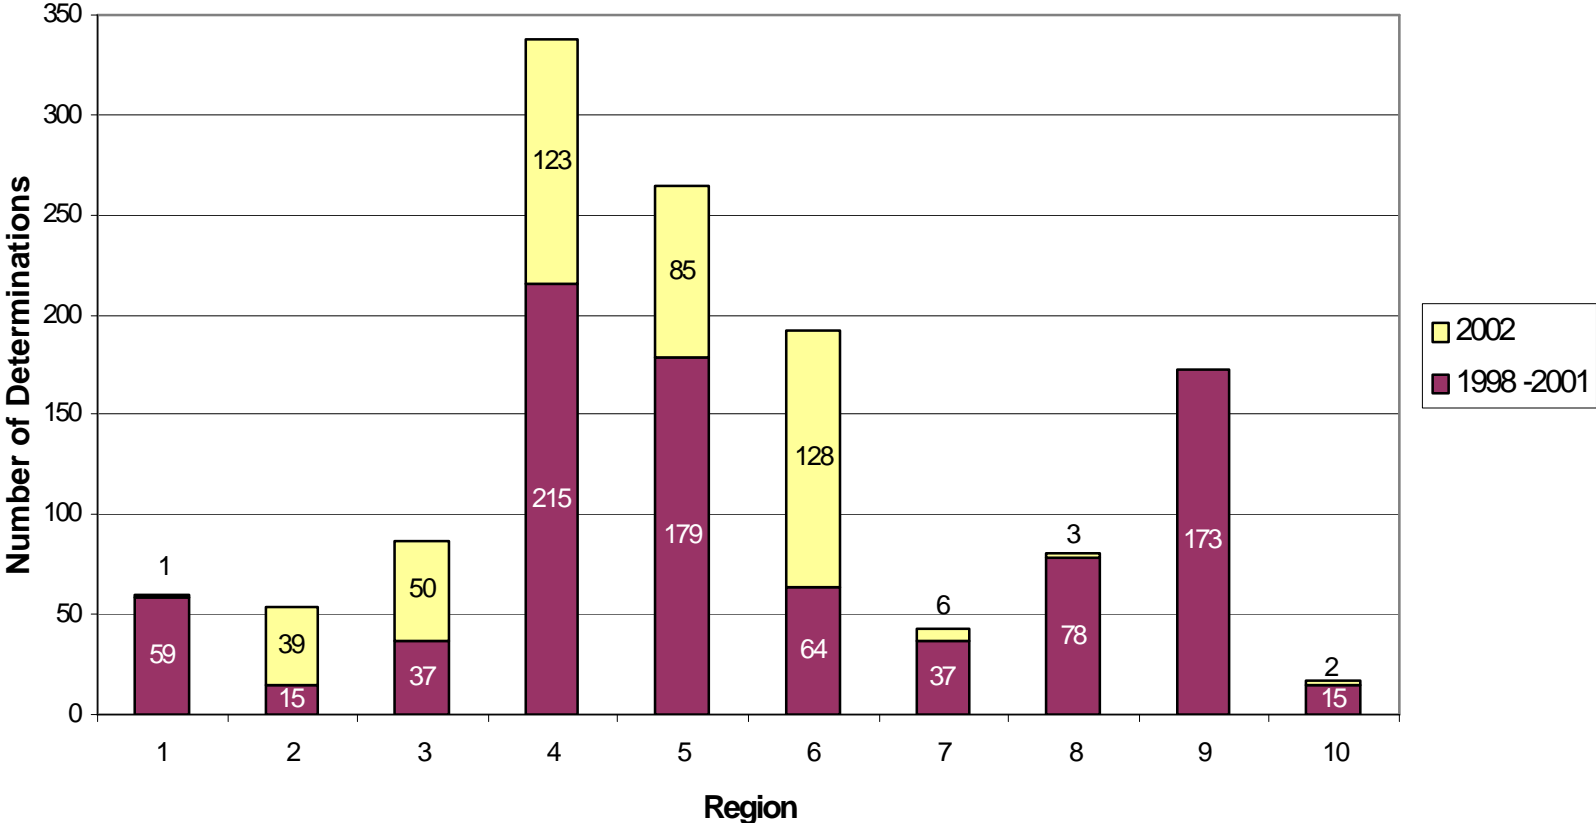

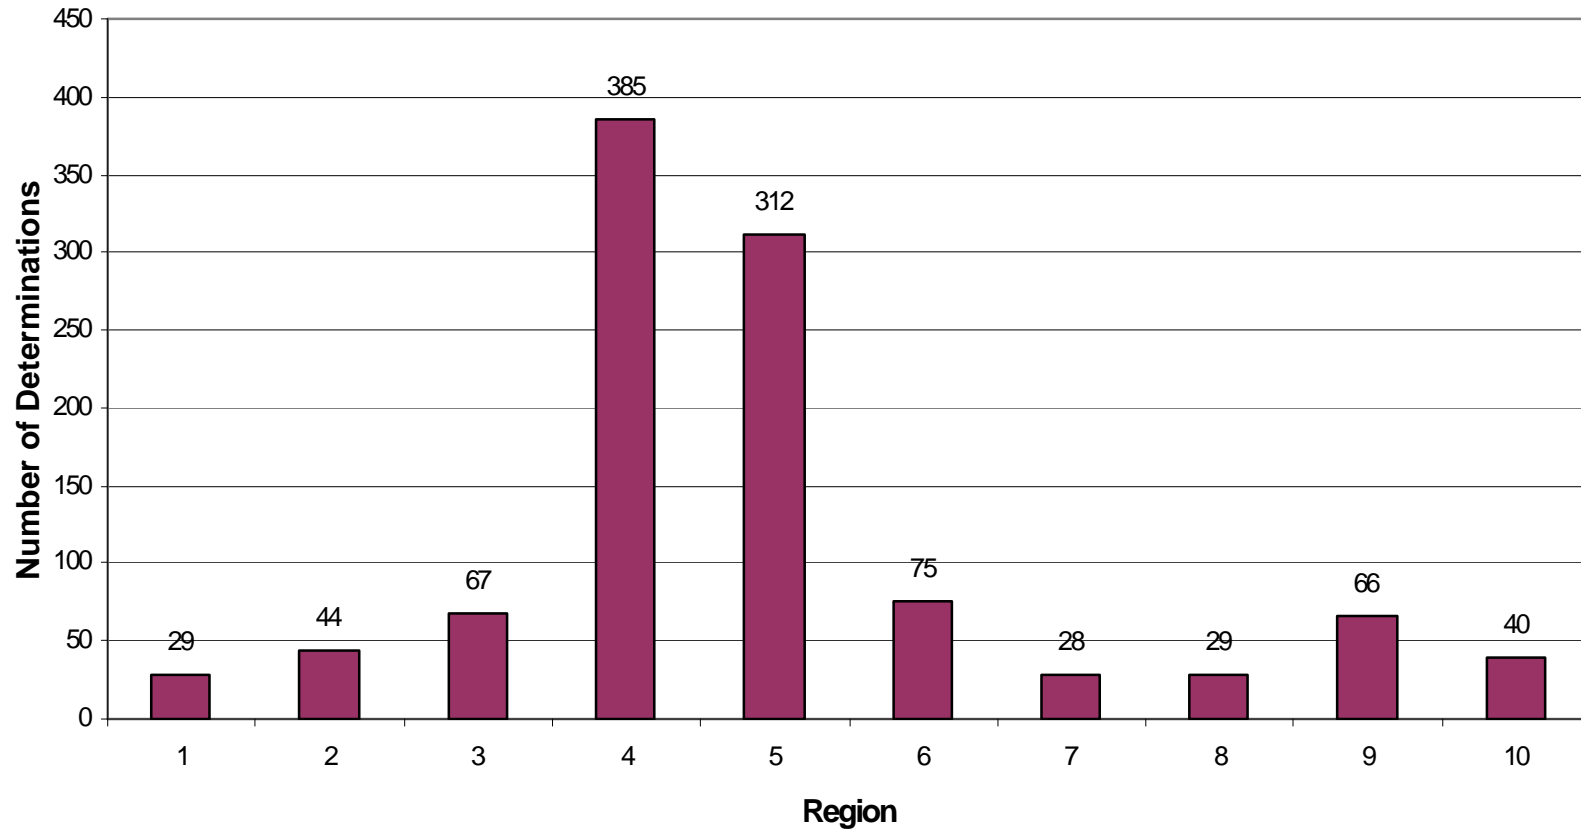

Figure 3 - Number of Determinations Updated by Region (2002)

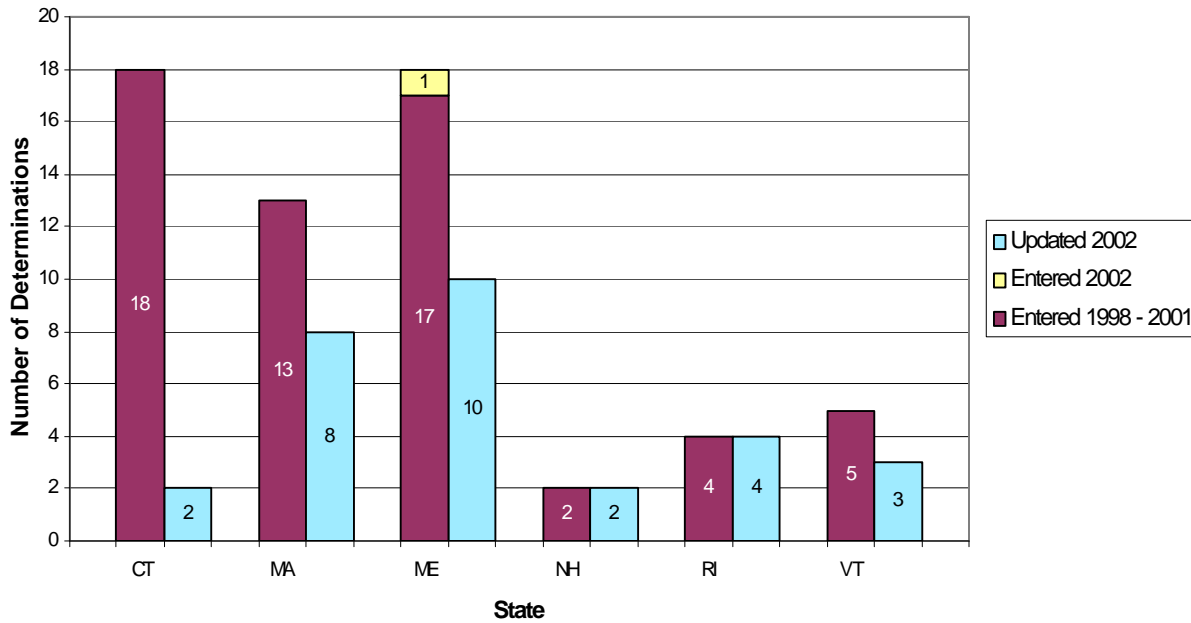

REGIONAL SUMMARY OF RBLC ACTIVITY

The determinations entered by permitting agencies in each EPA Region in the years 1998 through 2002 were presented and discussed in Table 1. This section presents the contribution of these agencies, grouped by EPA Region, in more detail. Appendix C, Index of Control Technology Determinations Entered or Modified in 2002 and Ordered by EPA Region and State, provides a detailed list of 2002 entries and updates.

EPA REGION 1

In EPA Region 1, one new determination from Maine was added to the RBLC and 29 existing RBLC determinations were updated in 2002. In the four previous years 59 determinations were entered, including determinations from each State in Region 1. In September 2001, the RBLC contractor visited the EPA Region 1 office to acquire information on major NSR permits that were not in the RBLC. Most of the 37 new additions to the Clearinghouse in 2001 resulted from that visit. Figure 4 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

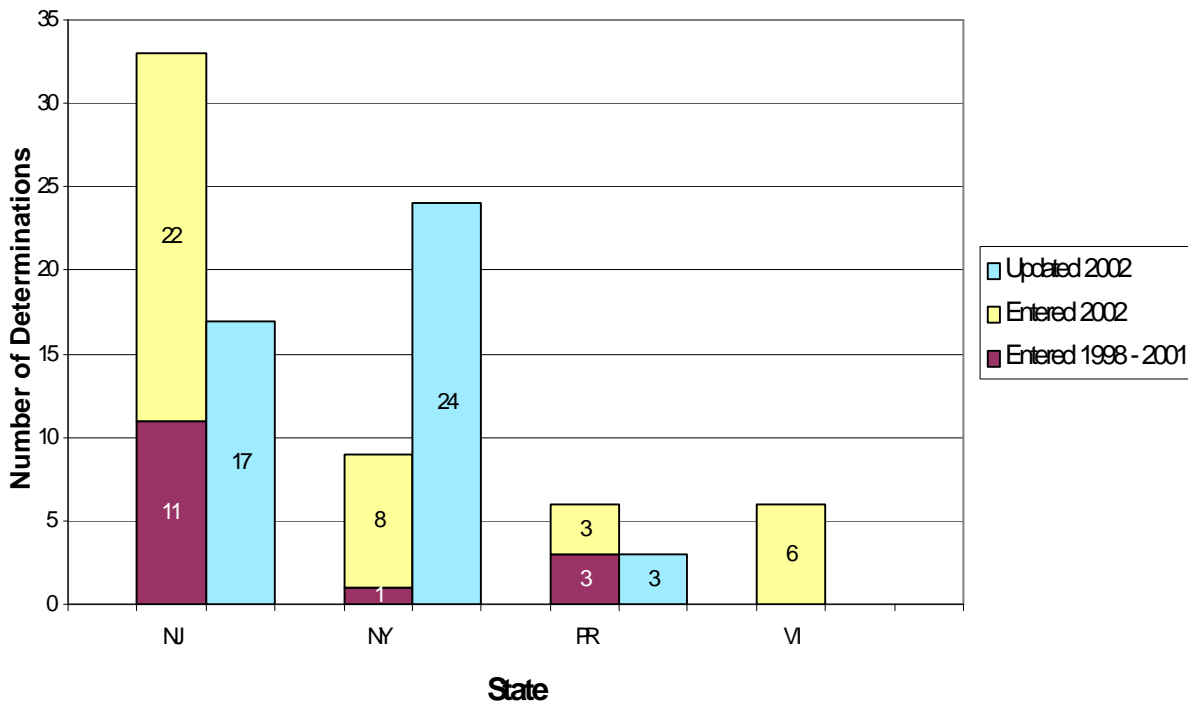

Figure 4 - Number of Determinations Ordered by State in Region 1 (1998 - 2002)

EPA REGION 2

An RBLC contractor visited the EPA Region 2 office, and State agency offices in New York in December 2001 to acquire information on major NSR permits that were not in the RBLC. Thirty-nine determinations were added to the RBLC from EPA Region 2 in 2002. New Jersey had the largest number of determinations, with 22 new entries. Six new determinations were added for the U.S. Virgin Islands, which had no new entries in the four previous years. (NOTE: EPA Region 2 issues NSR permits in PR and the VI.) A total of 44 determinations for Region 2 were updated in 2002. Determinations were updated for all States in Region 2 with the exception of the U.S. Virgin Islands. In the four previous years, 1998 through 2001, 15 determinations were entered, with 11 entries from New Jersey. Figure 5 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

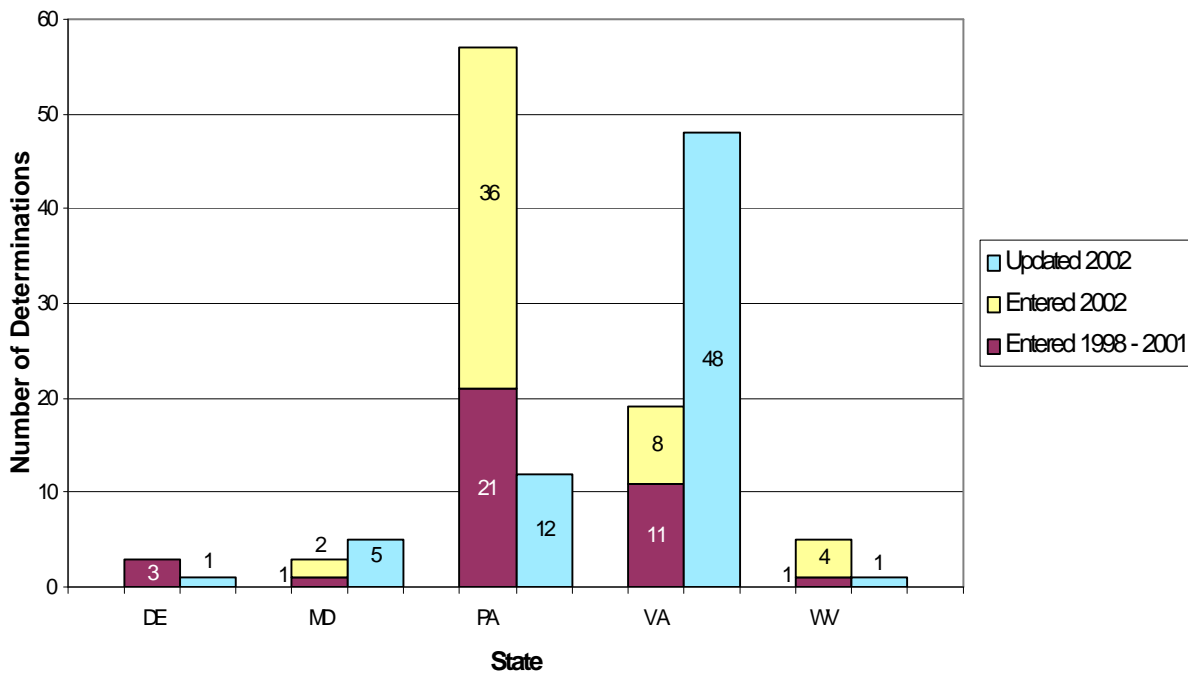

Figure 5 - Number of Determinations Ordered by State in Region 2 (1998 - 2002)

EPA REGION 3

An RBLC contractor visited the EPA Region 3 Office in July 2001 and the Virginia Department of Environmental Quality office in February 2002 to acquire information on major NSR permits not in the RBLC. Fifty determinations were added to the RBLC from EPA Region 3 in 2002. In the four previous years, 1998 through 2001, 37 determinations were entered. All of the States except Delaware contributed at least one determination in 2002. Pennsylvania contributed the greatest number of new entries with 36. No determinations were entered by Washington, D.C. Sixty-seven determinations from Region 3 were updated in 2002. Virginia had the majority of updated determinations. Figure 6 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

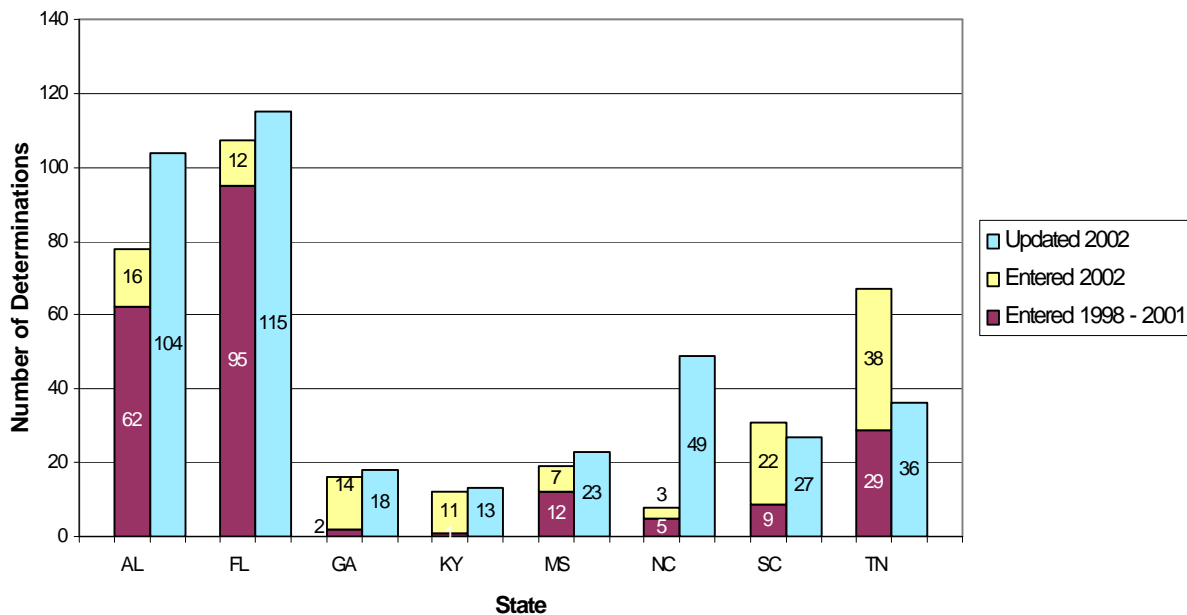

Figure 6 - Number of Determinations Ordered by State in Region 3 (1998 - 2002)

EPA REGION 4

An RBLC contractor visited the EPA Region 4 office in January and April 2002 to acquire information on major NSR permits not in the RBLC. One hundred twenty-three determinations were added to the RBLC from EPA Region 4 in 2002, bringing the total over the five-year period to 338. No other region has entered as many new determinations. In the four previous years, 1998 through 2001, 215 determinations were entered, with close to three-fourths of those being entered from Alabama and Florida. Florida, which entered 12 determinations in 2002, submitted more than any other State in the Region during the five year period. Tennessee accounted for most new determinations in 2002, with 38. Georgia, Kentucky, South Carolina, and Tennessee accounted for more new entries in 2002 than during the previous four years combined. Three hundred eighty-five determinations from Region 4 were updated in 2002. Figure 7 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

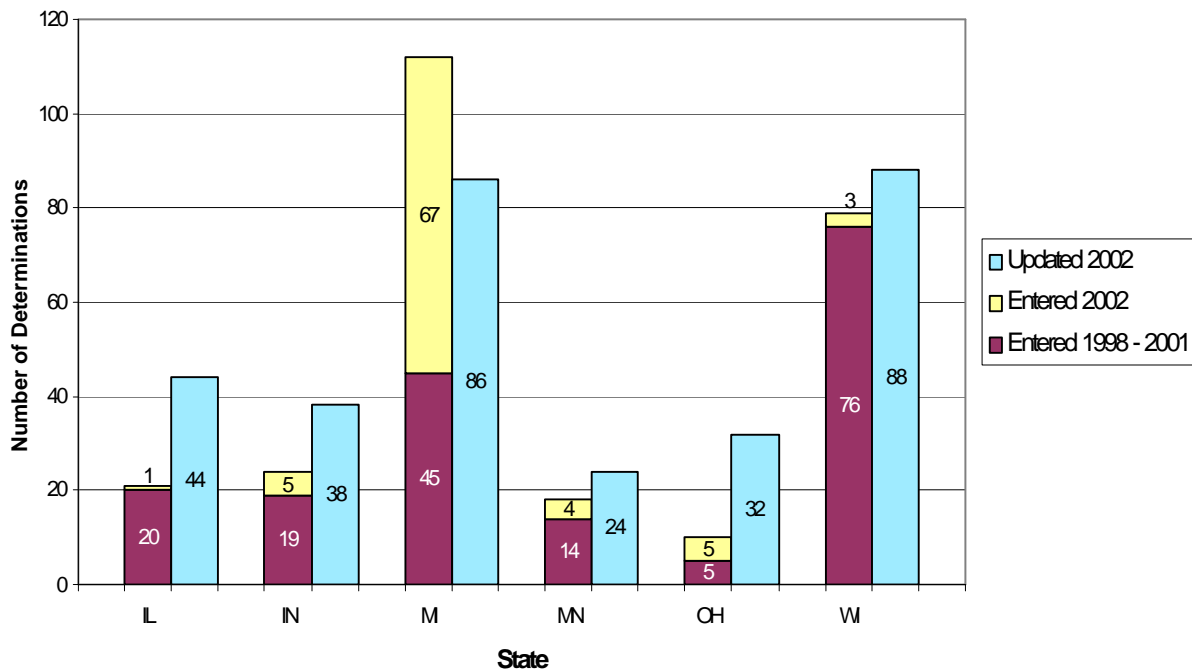

Figure 7 - Number of Determinations Ordered by State for Region 4 (1998 - 2002)

EPA REGION 5

An RBLC contractor visited the EPA Region 5 office in April 2002 to acquire information on major NSR permits not in the RBLC. Eighty-five determinations were added to the RBLC from EPA Region 5 in 2002. In the four previous years, 1998 through 2001, 179 determinations were entered. Michigan surpassed Wisconsin in 2002 as the highest contributor for the five-year period by adding 67 new determinations. Three hundred twelve determinations from Region 5 were updated in 2002. Figure 8 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

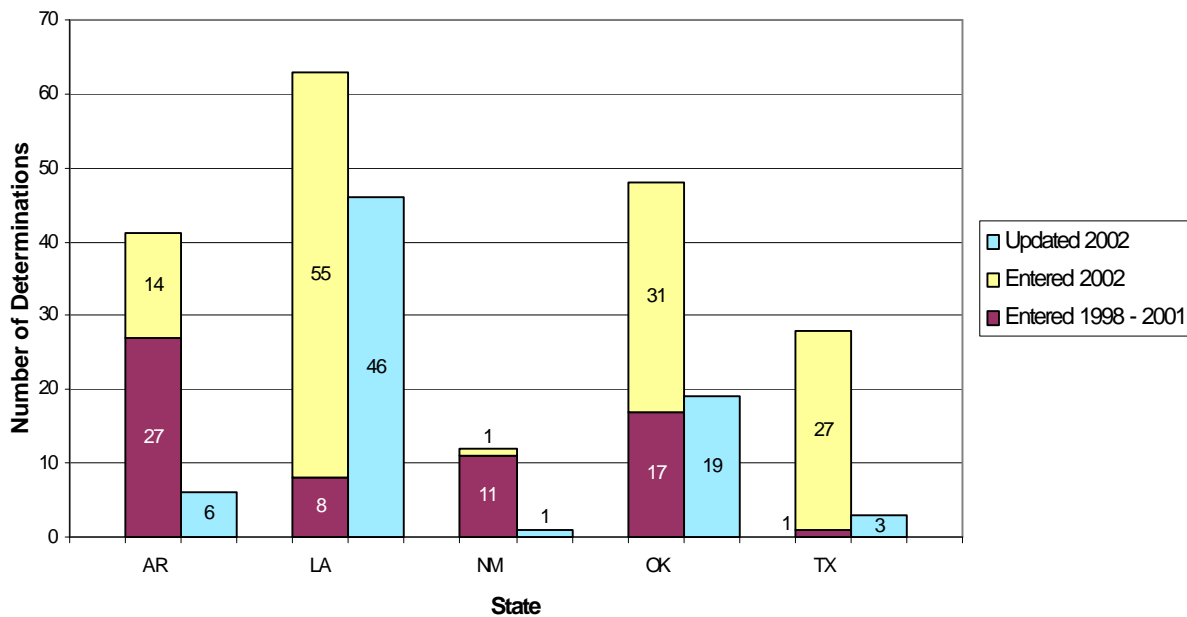

Figure 8 - Number of Determinations Ordered by State for Region 5 (1998 - 2002)

EPA REGION 6

An RBLC contractor visited State agency offices in Louisiana in August 2002 and Texas in July 2002 to acquire information on major NSR permits not in the RBLC. However, only 27 of the 416 major NSR permits issued in the past 5 years and identified in Texas were entered. The RBLC is working with the Texas Commission on Environmental Quality to complete data acquisition and entry of the remaining permits. One hundred twenty-eight determinations were added to the RBLC from EPA Region 6 in 2002, double the amount of determinations entered in the four previous years combined. Louisiana and Oklahoma surpassed Arkansas as the largest contributors for the five year period, by adding 55 and 31 new determinations in 2002, respectively. New Mexico entered one new determination in 2002. Seventy-five determinations from Region 6 States were updated in 2002. Figure 9 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

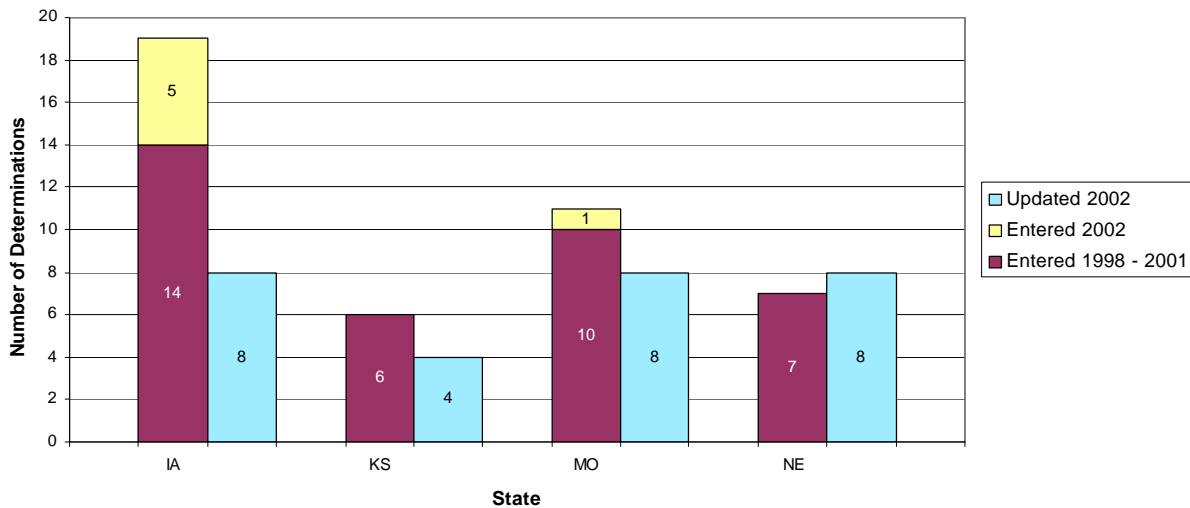

Figure 9 - Number of Determinations Ordered by State for Region 6 (1998 - 2002)

EPA REGION 7

Six determinations were added to the RBLC from EPA Region 7 in 2002. Five of these were determinations from Iowa. In the four previous years, 37 determinations were entered. Determinations submitted from the Region were spread evenly over the States for that period. The RBLC contractor visited the EPA Region 7 office in June 2001 to acquire information on major NSR permits. A total of 28 determinations from Region 7 were updated in 2002, also spread evenly among the states. Figure 10 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

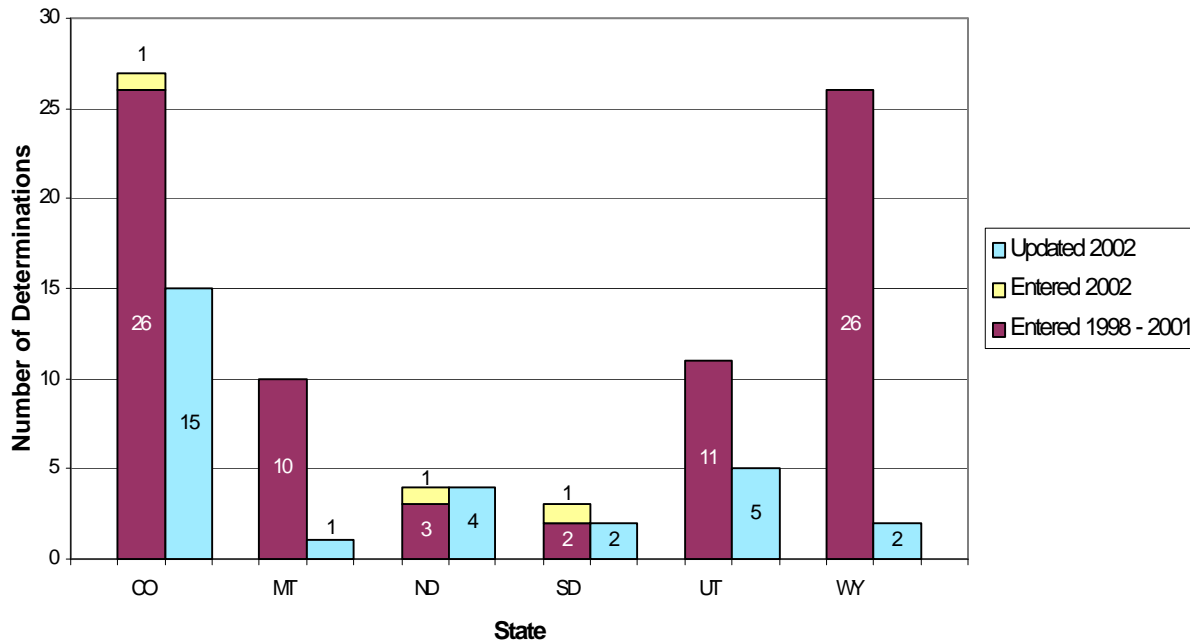

Figure 10 - Number of Determinations Ordered by State for Region 7 (1998 - 2002)

EPA REGION 8

Three determinations were added to the RBLC from EPA Region 8 in 2002. Colorado became the highest five-year contributor during 2002 by submitting one new determination. The other two new additions came for North Dakota and South Dakota. Montana, Utah, and Wyoming did not submit any new determinations in 2002. Twenty-nine determinations from Region 8 were updated in 2002, half of which were from Colorado and the other half spread among the other States. In the four previous years, 1998 through 2001, 78 determinations were entered. In that period, Colorado and Wyoming were the largest contributors. The RBLC contractor visited the EPA Region 8 office in April 2001 to acquire information on major NSR permits not in the RBLC. Figure 11 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

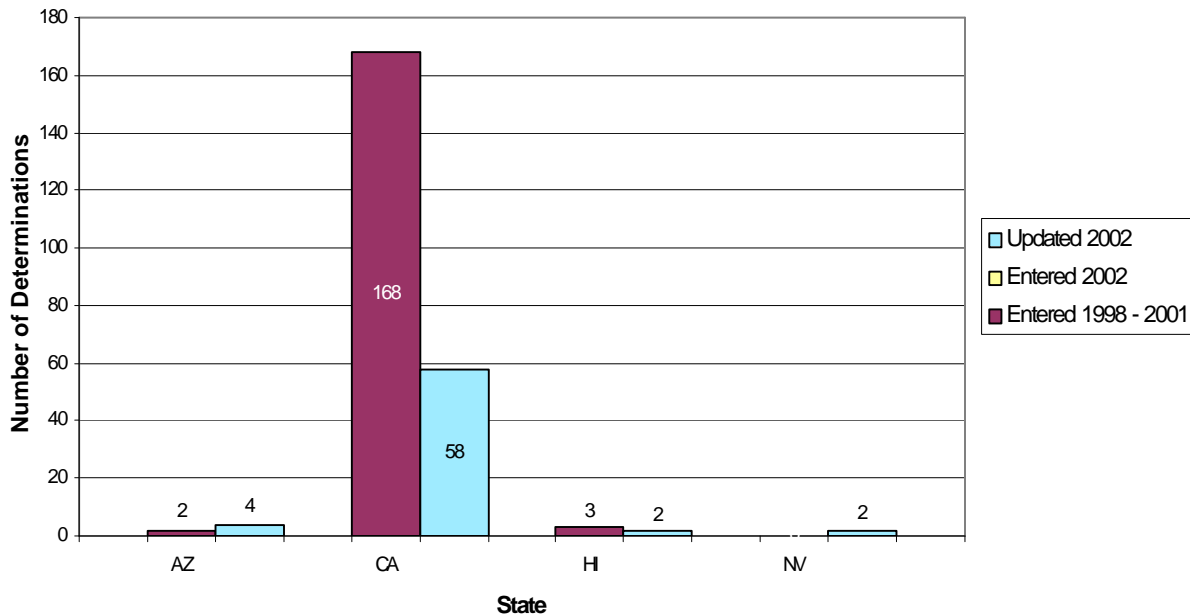

Figure 11 - Number of Determinations Ordered by State for Region 8 (1998 - 2002)

EPA REGION 9

No determinations were added to the RBLC from EPA Region 9 in 2002. In the four previous years, 1998 through 2001, one hundred seventy-three determinations were entered, almost all of them coming from California agencies. Nevada has entered no determinations during this five year time period. Sixty-six determinations from Region 9 were updated in 2002, with the majority again coming from California agencies. The RBLC has been working closely with the California Air Resources Board (CARB) to reestablish procedures to enter major NSR permit data into the RBLC. CARB has indicated that it will make significant contributions to the RBLC in 2003 for permits issued during the past three years. In addition, the RBLC is working with other State and local agencies in Region 9 to assure that all of their major NSR permits issued have and will continue to be entered into the RBLC. Figure 12 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

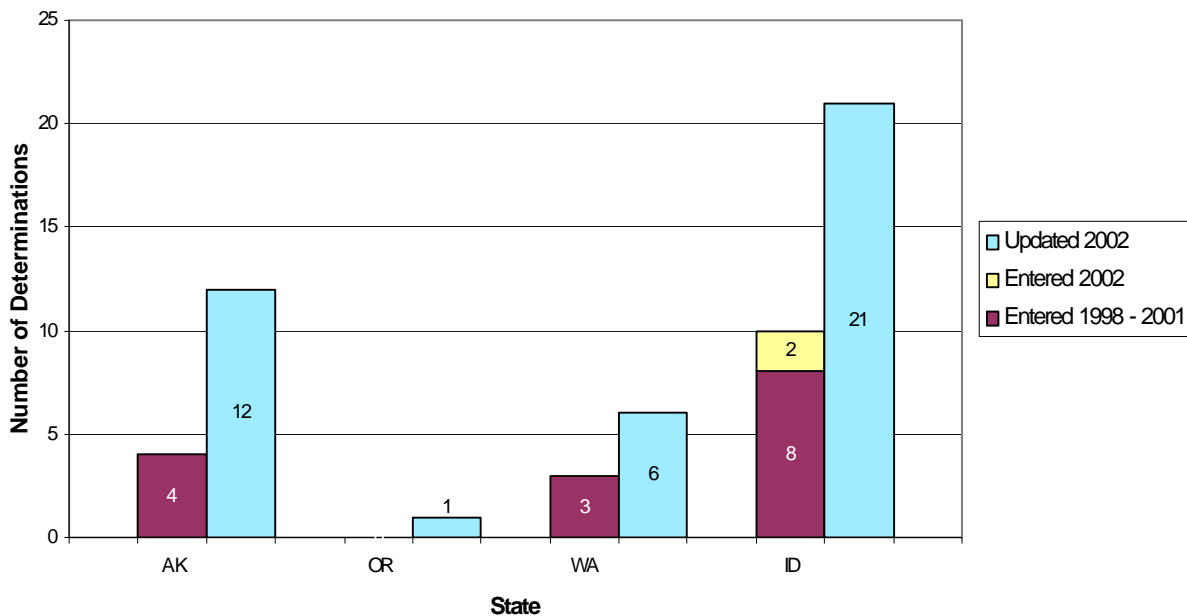

Figure 12 - Number of Determinations Ordered by State for Region 9 (1998 - 2002)

EPA REGION 10

An RBLC contractor visited the EPA Region 10 Office in 2001 to acquire information on major NSR permits not in the RBLC. However, logistical and administrative issues significantly delayed data entry. Information on at least 30 new NSR permits provided during the visit still have not been entered in to the RBLC. The Clearinghouse is working diligently to correct this situation. These pending additions have not been included in the 2002 totals because the data has not actually been entered into the RBLC. In spite of this problem, two Idaho determinations were added to the RBLC from EPA Region 10 in 2002. In the four previous years, 1998 through 2001, 15 determinations were entered. Forty determinations from Region 10 were updated in 2002, half of which were from Idaho. Figure 13 shows the proportional entries by State for 2002 and the years 1998 through 2001, respectively, as well as the updates for 2002.

Figure 13 - Number of Determinations Ordered by State for Region 10 (1998 - 2002)

INDUSTRY ACTIVITY SUMMARY

Table 2 lists major RBLC process categories, with examples of individual process types within each group. The process type examples presented in Table 2 are not meant to be definitive exhaustive lists of all process types within a process category. Instead, they represent some of the more recognizable types within a given group.

TABLE 2. RBLC Major Process Categories

Process Group Number/Name	Process Type Examples
10.000 COMBUSTION	Fuel Oil Combustion (Boilers) Coal Combustion (Boilers) Wood Waste Combustion (Boilers) Natural Gas Turbines Gasoline Engines Process Gas Turbines
20.000 WASTE DISPOSAL	Municipal Waste Combustors/Incinerators Hazardous Waste Incineration Hazardous Waste Site Remediation Industrial Landfills Contaminated Water Treatment
30.000 WOOD PRODUCTS INDUSTRY	Reconstituted Panelboard Plants (waferboard, particleboard, etc.) Paper Production Woodworking Plywood Manufacturing
40.000 ORGANIC EVAPORATIVE LOSSES	Plastic Parts & Products Surface Coating Petroleum Liquid Storage in Floating Roof Tanks Organic Solvent Cleaning & Degreasing Dry Cleaning Automotive Refinishing
50.000 PETROLEUM/NATURAL GAS PRODUCTION AND REFINING	Petroleum Refining Treating Processes Petroleum Refining Wastewater Treatment Oil and Gas Field Services

60.000 CHEMICALS MANUFACTURING	Phosphate Fertilizers Production Sulfuric Acid Plants Epoxy Resins Production Storage Tanks (SOCMI Chemicals) Rayon Production Pharmaceutical Production
70.000 FOOD AND AGRICULTURAL PRODUCTS	Vegetable Oil Production Alcoholic Beverages Production Bread Bakeries Feed and Grain Storage
80.000 METALLURGICAL INDUSTRY	Steel Foundries Lead Acid Battery Manufacturing Primary Lead Smelting Primary Aluminum Production
90.000 MINERAL PRODUCTS	Portland Cement Manufacturing Asbestos Manufacturing Brick Production Glass Manufacturing
99.000 MISCELLANEOUS SOURCES	Industrial Process Cooling Towers Leather Tanning Rubber Tire Production Geothermal Power

Figure 14 (see page 21) illustrates the distribution of process groups specified in the determinations entered for 2002 and for the years 1998 through 2001 at the national level. A determination may report more than one process, so totals in the graph will not exactly match those in Table 1. Instead, they represent the number of determinations containing a particular type of process. The major categories shown in Figure 14 represent multiple processes as shown in Table 2. For instance, Process Category 10, Combustion, includes process groups for both external and internal combustion devices, each containing processes for each type of fuel that can be consumed.

The most frequently entered process group for the five-year period was combustion processes, followed distantly by organic evaporative loss and mineral products processes. For combustion sources, a trend towards natural gas combustion is continuing. Over half of the combustion source determinations entered during 2002 contained a natural gas-fired device. This continues a trend towards less-polluting fuels seen in 2001, where over half of the determinations also contained a natural gas-fired device. That is an increase over previous years in which natural gas-fired devices were less than half of the total combustion sources. More internal combustion

devices (i.e. turbines and IC engines) were permitted than boilers. This continues the trend seen in recent years. The combustion devices were from a wide variety of states, with New Jersey, Oklahoma, Louisiana, and South Carolina among the top contributors.

The majority of the determinations added to the RBLC over the past five years under organic evaporative losses were in the 41.000 category - Surface Coating/Printing/Graphic Arts. Nearly two-thirds of the determinations were submitted in 2002. The increase in the number of surface coating processes added during 2002 was due, in part, to an increase in submissions related to category 41.002 -Automobiles and Light Truck Surface Coating (OEM). Fifty percent of the determinations falling under the organic evaporative losses category submitted during 2002 were from Michigan and Tennessee.

The number of entries under process category 30.000 - Wood Products has increased each year for the last five years. Forty percent of the entries in this process category over the last five years were entered in 2002. Seventeen of these entries were for Kraft Pulp Mills, process category 30.002. These 17 entries were distributed among 10 states. Louisiana had the highest total number of determinations added to the RBLC in 2002, followed by Oklahoma. Over the last five years, Wisconsin had the highest total number of determinations added to the RBLC in this process category. The remainder of the determinations were distributed across 21 States, with Alabama, Arkansas, and Louisiana being the major contributors among those.

Mineral Products, process category 90.000, was consistently represented throughout the five year period, with a small increase in 2002. There was a slightly higher proportion of determinations added from category 90.019 - Lime / Limestone Handling / Kilns / Storage / Manufacturing, and category 90.028 - Portland Cement Manufacturing during the five-year period. Mineral Products determinations entered during 2002 were from 11 states in six EPA Regions.

The Metallurgical Industry, process category 80.000, also had a large number of entries over the past five years with nearly 85 percent of the additions occurring between 2000 and 2002. The number of 2002 additions declined from the totals seen in 2000 and 2001, and was spread among 11 states. Most of the determinations submitted nationwide during the five year period were from process category 81.004, Iron Foundries, with category 81.006, Steel Foundries, and 81.007, Steel Manufacturing, following distantly. As compared to the previous four years, the number of determinations for process category 81.004 declined in 2002, while the numbers for categories 81.006 and 81.007 increased.

There was a surge of determinations from Chemical Manufacturing, process category 60.000, with over 40 percent of the 85 additions being entered in 2002. This increase was distributed among several process categories that were well-represented among several States. Texas had the largest number of new determinations in 2002, followed by Michigan, while Florida had the largest number of new determinations from 1998 to 2002.

The remaining major categories are all under 60 total determinations over the past five years. No major trends can be seen emerging from these areas. However, it is worth noting that there is steady activity within these categories and determinations are continuing to be added to the RBLC across many different types of industries.

As discussed in the national summary section above, Regions 4 and 6 contributed the largest share of determinations. They accounted for over 50 percent of the determinations submitted in 2002. Entries from these two regions represent a wide range of processes. A large portion of the processes are combustion sources. In general, 2002 showed an overall increase in the number of determinations and most process categories were well-represented. Table 3 shows the distribution of process entries by region.

Figure 14 - Distribution of Entries by Process Group (1998 through 2002)

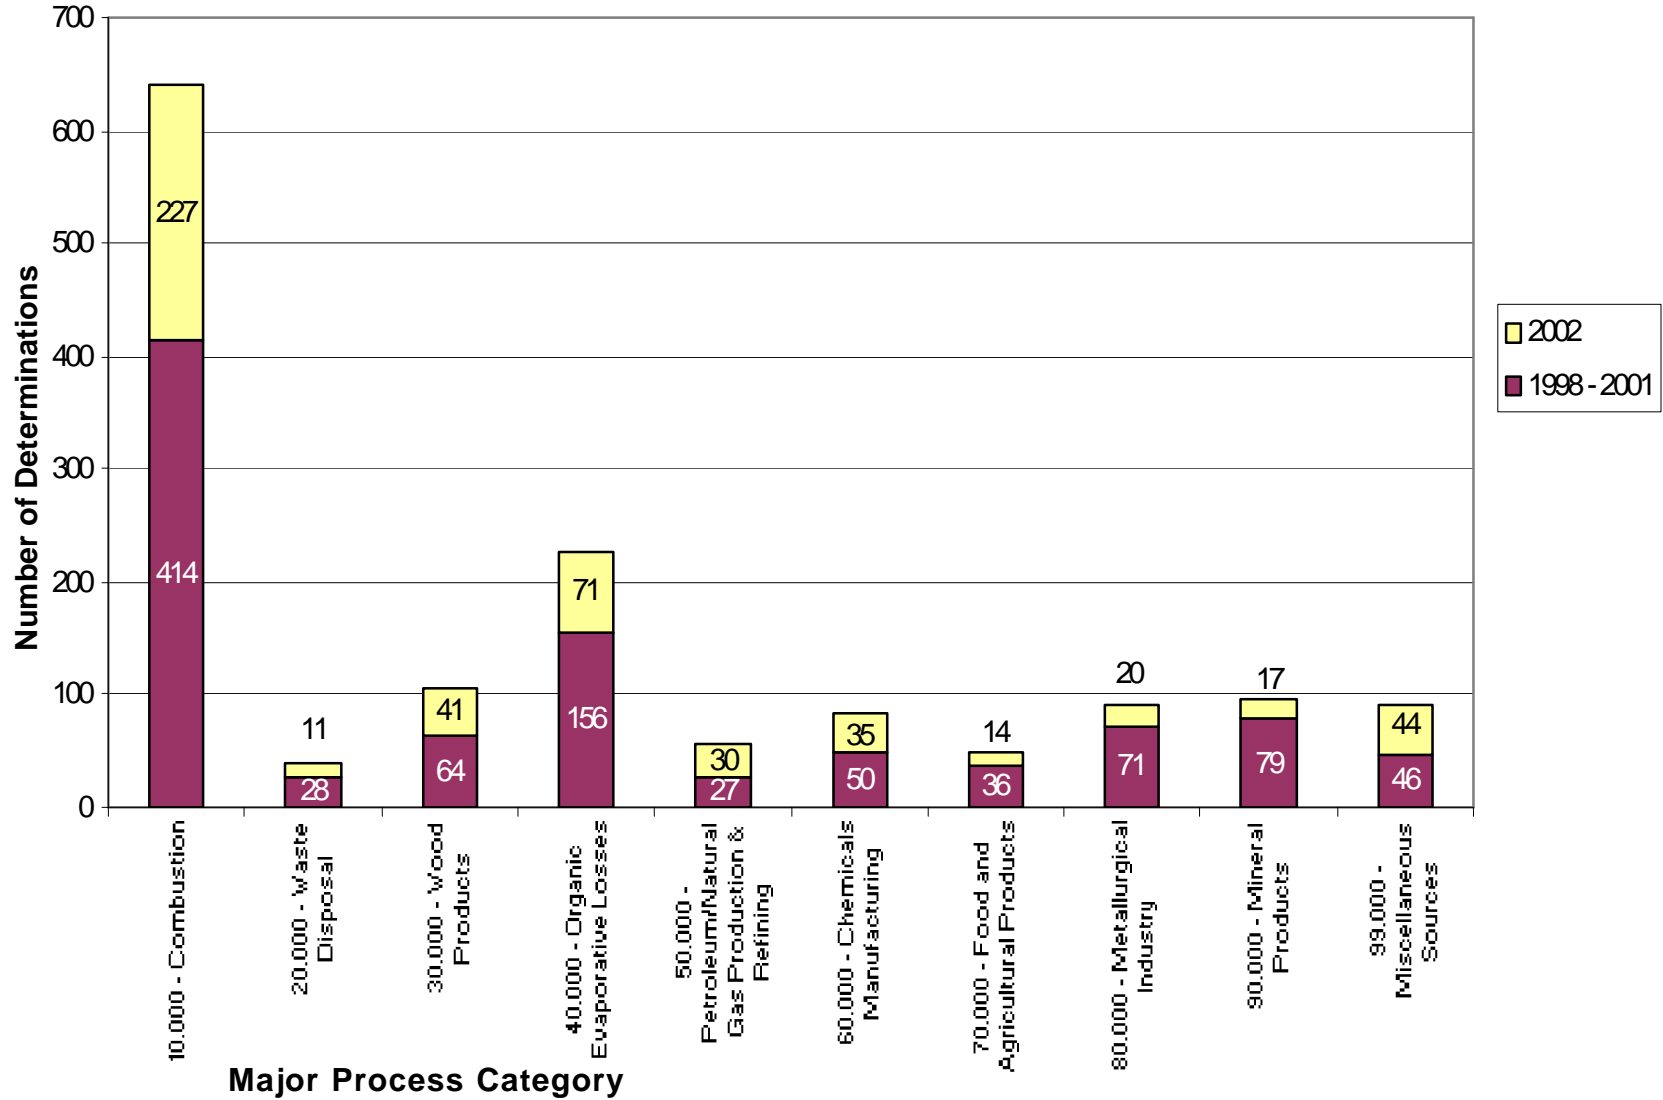

Table 3. Process Entries by Region in 2002

RBLC PROGRAM DEVELOPMENT

In 2002 the RBLC continued to implement major improvements and gather missing information. The RBLC held a Workshop in San Francisco, CA on January 9, 2002 to consider user needs and effectively allocate RBLC resources. This was the fifth in a series of workshops hosted by RBLC. The four previous workshops were held in: (1) Washington, DC on June 6, 2001; (2) Research Triangle Park, NC on June 13, 2001; (3) Denver, CO on July 16, 2001; and (4) Chicago, IL on August 22, 2001. Summaries of each workshop and a list of action items from all workshops are posted on the RBLC Web in the RBLC Products download area under the heading "RBLC Public Workshops."

Five problem areas have been identified that need to be addressed. These are:

1. Incomplete Data: The RBLC does not contain all BACT and LAER determinations and, for those determinations that are included, the information is incomplete. Most submissions are voluntary and it is difficult to collect missing information.
2. Compliance not verified: In most cases the RBLC Web does not include information that confirms that a source was constructed and that compliance with the emission limits indicated in the data base (permit to construct) has been demonstrated. Although data fields are provided, permitting agencies rarely update the RBLC data base to indicate that compliance with the emission limits in the permit have been verified.
3. No Cost Information: Although data fields are provided, virtually no cost information has been entered or provided by agencies.
4. Emerging Technologies: The RBLC data base indicates the technologies and emission limits that have been approved in permits. Users have expressed a need to identify and obtain information on new and emerging technologies that may be more effective in reducing air pollution and/or more cost effective.
5. User-friendliness: The RBLC Web can be confusing to new users and, at times, can even challenge more experienced users. We would like to make the Clearinghouse more user-friendly and improve the quality of service offered.

The RBLC Subgroup, NSR Advisory Subcommittee, Clean Air Act Advisory Committee did make recommendations in January 1994 that generally covered most of the problems noted above. To a large extent, RBLC workshop participants echoed these recommendations, but were able to relate them to specific action items that addressed the RBLC Web as it now exists and the Clearinghouse's current mode of operation.

The RBLC is now focusing on these action items and continues to implement needed improvements based on the recommendations of the RBLC Subgroup and Workshop attendees. A summary of these improvements and related activities follows.

Completed actions:

- Quality assured existing RBLC data base and identified missing information
- Visited EPA Offices in Regions 1, 2, 3, 4, 5, 7, 8 and 10 to collect missing information from their permit files
- Visited State agencies in New York, Virginia, Texas and Louisiana to acquire data not in regional office files
- New users' manual and annual reports in a new and more readable format.
- New RBLC Standalone Editor (off-line PC based software for users to enter and format RBLC data off-line for uploading to the RBLC data base)
- On-line data entry quality assurance utilities
- Linkage to related technical sites, software tools, State and local permitting agency sites/contacts
- New and improved on-line context sensitive HELP
- Direct access to process and pollutant data from user-generated query results pages
- User-generated customized retrievals / output reports
- New user-friendly "Basic" search routine

On-Going Initiatives:

- Improved coordination with EPA Regional Offices
- Resolve issues with California and restore data input
- Complete data acquisition activities in Texas
- Improvements in response to the numerous public workshop comments continue to be implemented
- More definitive process identification system (upgrade process codes to enhance search capabilities)
- Update Standard Industrial Classification (SIC) codes to the new North American Industrial Classification System (NAICS).
- Restore Ranking Capability (ability to list most stringent to least stringent emission limits and technologies for a specific type of process and pollutant)
- New Clean Air Technology Data Base (direct access to new technology /venders)
- Emerging Technology Technical Bulletins - short reports that provide basic information on the availability, effectiveness, cost and application of new air pollution technology

Under consideration

- Cost data acquisition
- Provide links between:
 - RBLC main (permits) data base, RBLC regulation data base, and Code of Federal Regulations;
 - RBLC main data base to permits on State and local agency Web pages
- Training - Develop on-line tutorial and/or CD based training material
- Industry Sector Technology Assessments - reports that identify and evaluate technology used in a particular industry sector, including their effectiveness and cost; also emerging technology and trends
- Graphic Display of RBLC Sources, Class I Areas and other GIS information

Other improvements and revisions to the system will continue to be considered as a result of contacts with various State and local agencies. These improvements and revisions will be evaluated and made based on the recommendations of the State and local agencies that are entering or submitting determinations to the Clearinghouse. Check the RBLC Web for more details on improvements and enhancements.

All inquiries concerning RBLC and information contained in the data base should be directed to:

APPENDIX A
ABOUT THE RACT/BACT/LAER CLEARINGHOUSE

BACKGROUND

The Clean Air Act prescribes several technology-based limitations affecting new or modified air pollution sources: 1) new source performance standards (NSPS); 2) best available control technology (BACT); and 3) lowest achievable emission rate (LAER). New Source Performance Standards are uniform national emission standards set by EPA for specific categories of new or modified stationary sources. In addition to meeting NSPS when applicable, major new or modified sources must also install either BACT or LAER, both of which are determined on a case-by-case basis. In all cases, BACT or LAER must be at least as stringent as any applicable NSPS. The BACT requirement, which is a part of the Prevention of Significant Air Quality Deterioration program (Sections 165 and 169 of the Clean Air Act), applies to emissions in areas that are in attainment with National Ambient Air Quality Standards (NAAQS). The LAER requirement, which is a part of the Nonattainment Program (Sections 171 and 172 of the Clean Air Act), applies to emissions that affect areas that are not in attainment with the NAAQS. While the specific criteria governing a BACT, LAER, or NSPS emission limit vary, the general underlying approach for all such determinations is to require "best control" on all major new or modified sources. Since 1977, State and local air pollution control agencies have gradually assumed primary responsibility for making BACT and LAER determinations. As this authority was decentralized from the Federal government, it became important that information be made available to control agencies to assist them in making control technology determinations in a nationally consistent manner. As a result, the BACT/LAER Clearinghouse was established in 1979.

The 1990 Clean Air Act Amendments (CAAA) mandated several minor changes to the BACT/LAER Clearinghouse. Although the changes were minor, State and local agencies should note them for future consideration. The first change involved the name and an addition to the type of data contained in the Clearinghouse. The name changed to the RACT/BACT/LAER Clearinghouse (RBLC) and now includes Reasonably Available Control Technology (RACT) determinations. RACT is defined as the lowest emission limitation that a particular source is capable of meeting by application of control technology that is reasonably available considering technological and economic feasibility. RACT is the minimum requirement EPA can accept for existing major sources in State non-attainment plans. Control Technique Guideline (CTG) documents were assembled by the EPA to assist State and local air pollution control agencies in determining the level of control that should be required within each area. The RBLC accepts case-by-case RACT decisions, as well as general RACT requirements, to assist State and local agencies in determining what level of control other areas of the country are requiring and, in turn, what level of control should be required within their jurisdiction.

The second change mandated by the 1990 CAAA involves LAER determinations. Prior to the 1990 CAAA, all submittals to the Clearinghouse were voluntary. However, Section 173(d) of the 1990 CAAA now mandates that State and local agencies submit any and all LAER determinations that they issue.

The basic purposes of the RBLC are to: 1) provide State and local air pollution control agencies, industry, and the public with current information on case-by-case control technology determinations that are made nationwide, and 2) promote communication, cooperation, and sharing of control technology information among the permitting agencies.

THE RBLC WEB

The RBLC's primary vehicle for sharing control technology information is the RBLC Web. The Clearinghouse provides on-line querying of its data base and makes the results available for viewing on-screen or downloading to a PC. This information system also supports direct submittals of control technology determinations by permitting agencies. Routine access to the data base is available to anyone who has a personal computer with access to the World Wide Web.

The RBLC Web is part of the Office of Air Quality Planning and Standards Technology Transfer Network (TTN) World Wide Web (Web) site. It can be accessed through the Clean Air Technology Web on the TTN. Users of the RBLC Web can search on any number of different items. Searchable items have been designated as "required" fields for new determinations.

The graphical environment of the Web supports a simplified search procedure. Users select a data base of interest (see below) and one or more searchable fields from drop-down lists displayed in their web browser and/or fill in text boxes with the value they are trying to match to execute the query. The query finds all determinations in the RBLC data base that match the specified criteria and displays the results for viewing in the browser. In addition, several output formats are provided for downloading or printing.

The permit data base in the Clearinghouse has been segmented into three searchable parts. Any one or combination of these segments can be searched at the same time. The current data segment contains completed RBLC determinations for permits issued within the past 10 years. The historical segment contains completed RBLC determinations for permits issued more than 10 years ago. Determinations in the current and historic segments of the RBLC data base are referred to as final determinations. The draft segment of the RBLC data base provides a work space for users to enter new and update existing determinations. Determinations in the draft segment are referred to as draft determinations. The RBLC staff regularly review draft determinations and promote accurate and complete determinations to final determinations (i.e., they become part of the current or historical segments based on their permit dates).

The RBLC also maintains a data base of federal regulations, that includes summaries of federal regulations enacted in response to the Clean Air Act. These rules include Maximum Achievable Control Technology (MACT) standards, National Emission Standards for Hazardous Air Pollutants (NESHAP), New Source Performance Standards (NSPS), and Control Techniques Guideline (CTG) documents that specify requirements for Reasonably Available Control Technology (RACT). The regulation data base offers options that allow you to scan or query the

regulation data. The query option brings the power of user-defined queries to the complex details of air pollutant emissions regulations. Using the same user-friendly browser interface as the RBLC's permit data base, users can build a query to locate pertinent regulations for a particular pollutant or process or for a broad array of other criteria. You can also bypass the query step and go directly to viewing a list of all the federal regulations.

	14. SPONSORING AGENCY CODE EPA/200/04	
15. SUPPLEMENTARY NOTES		
<p>16. ABSTRACT</p> <p>The Clean Air Act as amended in 1977 prescribes several technology-based limitations affecting new or modified air pollution sources: 1) new source performance standards (NSPS), 2) best available control technology (BACT), and 3) lowest achievable emission rate (LAER).</p> <p>The basic purposes of the RACT/BACT/LAER Clearinghouse are 1) to provide State and local air pollution control agencies with current information on case-by-case control technology determinations that are made nationwide and 2) promote communication, cooperation, and sharing of control technology information among the permitting agencies. The information presented in this compilation was abstracted from per-construction permits and submitted voluntarily by the State and local air pollution control agencies. The Clearinghouse is intended as a reference for States and local agencies in making RACT/BACT/LAER decisions.</p> <p>The RBLC has now moved to the World Wide Web. The RBLC Web address is: http://www.epa.gov/ttn/catc/</p> <p>Clicking on the RBLC logo on this page allows access to all of the information in the RBLC including interactive queries, customized reports, and downloadable copies of this and other RBLC documents.</p>
