

Foreward, page v - add

This document has been changed from the original publication dated December 2006. This document corrects references in Appendix 1 that improperly identified the content of Appendix 3 and Appendix 4. The document also clarifies the content of Appendix 4.

Appendix 1, page 22 – change text last paragraph, last sentence:

DU manufacturing and testing facilities in the United States are provided in Appendix 3-4, while Appendix 4-3 contains a listing of sites on the NPL that have or may have DU contamination.

Appendix 4, page 30 – change title

~~Depleted Uranium Manufacturing and Testing Facilities~~

Facilities Involved with the Manufacturing or Testing of Products containing DU and/or Components of Products Containing DU**

Appendix 4, page 31 - add footnote

**This list includes the locations and names of facilities involved in the manufacturing and/or testing of components that were eventually incorporated into a product containing Depleted Uranium (DU). Inclusion on this list does not imply that DU was undeniably present at the facility, but only denotes that the listed facility was part of the manufacturing or testing process of some aspect of a product containing DU. In a few cases, the components produced at the listed facility did not contain DU at that point of the process.
