

BOOST YOUR CASE WITH NUMBERS THAT COUNT

Can you quantify the dollars and public health impact of a loss of service?

EPA's free Water Health and Economic Analysis Tool (WHEAT) uses localized, zip code-specific information to provide you with hard numbers and quantifiable projections for your disaster planning scenarios. By enabling utilities to easily demonstrate the dollars-and-cents consequences of a loss-of-service event, WHEAT helps you make a convincing case for funding infrastructure upgrades and preparedness activities.

WHEAT — Your Friendly Disaster Planning Tool
