

What's New in this Version?

Version 2.0.18 of the Shipper Tool contains a number of updates and revisions to the prior version, 2.0.17. These updates have been implemented to enhance the usefulness, clarity and accuracy of the Tool, and are summarized below:

-  The validation check that determines if a payload entered by the user is out of range has been updated for Less-Than-Truckload truck fleets.
-  The import and export screens have been updated to allow users to import/export an XLSX file type (in addition to the CSV file type allowed previously).
-  Users can now enter payloads as low as 0.001 tons on the Activity screen.
-  If the user chooses the Way 4 participation level, the Carrier Subdivision screen is only considered complete if a carrier row is subdivided (not just if carrier identification information is entered). For example, a given carrier can be split by inbound and outbound operations, each with their own activity levels.
-  Miscellaneous text and format updates for clarification.
