INTRODUCTION

Bound with this introduction is the hardcopy 1990 "LIST OF LISTS" and a legend that describes the fields on the list. This document is a compilation of the lists of chemicals of environmental concern to EPA. For each chemical, analytical methods available for its analysis, the organization responsible for maintaining each method, and the regulatory origin and Agency lists on which the chemical appears are identified, as well as other information explained in the legend.

The "LIST OF LISTS" is presented alphabetically by technical (IUPAC and regulatory) and common chemical names. A given chemical may appear more than once on the list under different permutations of its name. For example, "Dimethyl sulfide" is also listed as "Methyl sulfide" and "Methane, thiobis-"; it can be looked up by any of these names.

The "LIST OF LISTS" is maintained on an IBM-compatible personal computer by the EPA Office of Water Regulations and Standards Industrial Technology Division and its contractor, Viar and Company. The automated list can be sorted by nine key fields, including Chemical Abstract Service registry number, analytical method, and others. LIST OF LISTS software and user documentation will soon be available.

Requests for information on ordering LIST OF LISTS software and questions concerning this document should be addressed to:

LEGEND

This legend defines the header and footer information on the LISTS report. The information is defined in approximate sequence from left to right, top to bottom.

HEADER LEGENDS

DATE — The date and time at which the report was printed.

BY — The organization that produced the report. OWRS ITD represents EPA's Office of Water Regulations and Standards, Industrial Technology Division.

REGULATORY NAMES, SYNONYMS AND COMMENTS — Various names for the analyte and other unrestricted comments. The arrow [-->] points to the name in the alphabetical listing. For each analyte, names are listed in approximate order of common usage. One of the names is the name set forth in the regulation (shown in the ORIGIN field). An IUPAC name appears in the list of names. The comment, if present, gives additional analytical information about the analyte.

CAS NO/BASE CAS NO — The Chemical Abstracts Service (CAS) Registry Number for the analyte. In certain instances, CAS has assigned a number to a compound class and this number is used. The Base CAS number will appear if the analyte is derived from a compound class and the analyte can be traced to that class.

Note: Where CAS has not assigned a number to an analyte or class, a synthetic numbering system has been used. This number begins with a single digit followed by an underscore or hyphen and three digits (e.g., 1_001), and assures that an analyte can be unambiguously identified in relationship to the class from which it is derived. The three digits following the underscore identify its position on the parent list and match the ORIGIN SEQUENCE number. At present, the following leading digits are used (definitions of acronymns and abbreviations are listed in the Legend under ORIGIN):

- 0- identifies the Drinking Water Priority List
- 0_ identifies the RQ List
- 1- identifies analytes on ITD's List
- 1_ identifies the RCRA Appendix VIII List
- 2- identifies the AIR List
- 2_ identifies the RPAR List
- 3- identifies the SWDA List
- 3_ identifies the VTOX List
- 4- identifies the SEC_313 List
- 4_ identifies the OAG_SRB List
- 5- identifies the SEC_112 List
- 10- identifies the FTC List

DETECTION LIMIT

EDL Estimated Detection Limit

MDL Method Detection Limit [49 FR 43234, (Appendix B)]

ML Minimum Level-ITD's definition of the minimum level that must give recognizable mass spectra and acceptable calibration points (see footnote 2 to Table 2 of Method 1624, Revision B [49 FR 43234].

PQL Practical Quantitation Limit-EPA Office of Drinking Water definition of the lowest level that can reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions [52 FR 25699], or the Office of Solid Waste definition of EPA's current best estimate of the practical sensitivity of the applicable method for RCRA groundwater monitoring purposes [52 FR 25945].

PREC/BIAS This column will contain precision and bias information on the analyte for the METHOD.
