EPA CERCLA Waste Capacity Assurance

Office of Emergency and Remedial Response Hazardous Site Control Division (OS-220)

Quick Reference Fact Sheet

INTRODUCTION

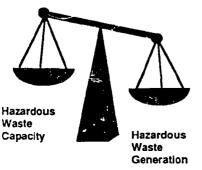

CERCLA STATE ASSURANCES:

- 20-Year Waste Capacity
- Off-Site Treatment
 or Disposal
- Cost Sharing
- Operation and Maintenance
- Real Property
 Acquisition

Waste capacity is one of the five assurances required of a State by the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The other assurances are for off-site storage, treatment or disposal; cost sharing; operation and maintenance; and real property acquisition. Before the hazardous waste Trust Fund can be used for remedial action, a State must assure EPA that it is able to treat or dispose of all hazardous waste that will be generated in the State during the next 20 years. Specifically, the State must assure availability of hazardous waste treatment or disposal facilities which:

- Have adequate capacity for disposal or treatment of all hazardous wastes generated in the State during the next 20 years
- Are within the State, or outside the State in accordance with an interstate or Regional agreement
- Are acceptable to EPA and comply with requirements of Subtitle C of the Solid Waste Disposal Act.

The State must demonstrate to EPA that it has a plan to implement its waste capacity assurance. With EPA approval of the State's plan, cleanup can proceed if the State provides all the necessary assurances in a legally binding document (i.e., a Cooperative Agreement or Superfund State Contract). Indian Tribes, though treated essentially as States in the Superfund program, are not required to provide the waste capacity assurance. This short sheet describes the statutory goals associated with the waste capacity assurance, the Capacity Assurance Plan (CAP), and additional sources of information.

STATUTORY GOALS

The purpose of the waste capacity assurance is to limit and manage the amount of hazardous waste generated in the United States each year by encouraging waste minimization and recycling, interstate agreements, and efficient and realistic hazardous waste management systems. Through implementing the waste capacity assurance, EPA hopes to encourage longer term planning and ultimately source reduction, an economically and environmentally sound method for improving hazardous waste management. In this way, the waste capacity assurance can help balance hazardous waste generation and the capacity available to handle it.
